SUBJECT: Urgent Quality Complaint ? Foreign Particle in Injectable Product

Product Name : Morphine Sulfate Injection
Strength : 10 mg/mL
Batch Number : MOR-2026-089
Manufacturing : 2025-09-10
Expiry Date : 2027-09-09
Product Type : FDF (Sterile Injectable)
Market : United States

COMPLAINT DETAILS

Complaint Type : Foreign Particle / Contamination
Complaint Date : 2026-02-13
Received Date : 2026-02-14
Affected Qty : 6 vials
Sample Avail. : Yes ? 4 vials quarantined and available for return

DESCRIPTION

During routine preparation of an IV analgesic dose for a post-operative patient, our pharmacy technician observed a visible dark brown fibrous particle suspended inside a sealed 10 mL vial of Morphine Sulfate Injection 10 mg/mL, batch MOR-2026-089. The particle measured approximately 3 mm in length.

The vial was immediately removed from use and quarantined. Upon inspection of the remaining vials from the same shipment, 3 additional vials showed similar particulate matter. A total of 6 vials from this batch have been quarantined.

The affected batch was received on 2026-01-28 and stored under recommended conditions (15-25 degrees C, protected from light). No other batches of this product are currently in use at our facility.

PATIENT IMPACT

The contaminated vial was identified before administration. No patient was harmed. However, given the critical nature of the product (opioid injectable), we consider this a HIGH patient safety risk and are requesting an urgent investigation and written response within 72 hours.

INITIAL ASSESSMENT

Severity : CRITICAL
Priority : IMMEDIATE
Patient Impact : HIGH
Quality Impact : CRITICAL
Regulatory : HIGH ? FDA MedWatch report may be required
Confidentiality : YES
